

STRATEGIC WORKFLOW ARCHITECTURE

5 Levels of Work, create enterprise value through the work they perform. These workflows connect through the five levels of business process architecture.

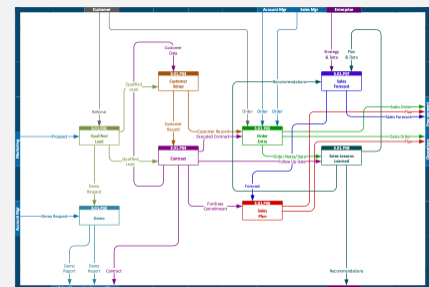

Enterprise, contains the business systems necessary to deliver the overall value proposition.

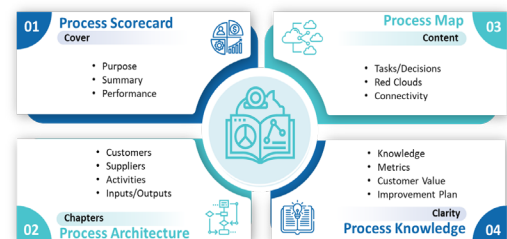

Business Systems, contain the contiguous and connected business processes that fulfill primary value propositions.

Processes, take inputs from suppliers and transforms them, through a series of tasks and decisions, to create transformed outputs for customers.

Tasks, are the work, actions, meetings and decisions that define process execution.

Knowledge, is the intellectual property of the Enterprise such as records, data, policies, standards, training, metrics, regulations, certifications, bills of materials, specifications, trademarks, and patents.
